HOW TO USE

Inlow's 60-second Diabetic Foot Screen woundscanadaca

Patient Name:	Clinician Signature:
ID number:	Date:

In order to use this tool efficiently and for best patient outcomes, complete the following three steps:

► Step 1: Complete an Assessment of the Left and Right Feet

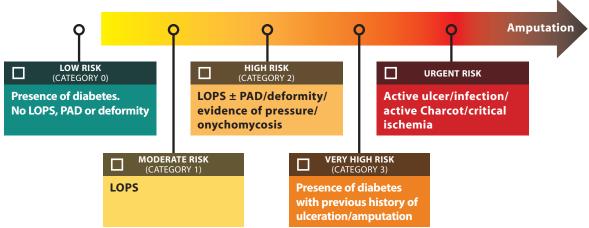

Instructions: Assess both feet using the four parameters identified within Inlow's 60-second Diabetic Foot Screen¹ to identify clinical indicators and/or care deficits. Once each parameter has been assessed move on to Steps 2 and 3.

Inlow's 60-second Diabetic Foot Screen		
LEFT FOOT		RIGHT FOOT
1. Assess for Skin and Nail Changes	Recommendations and Referrals*	1. Assess for Skin and Nail Changes
Skin ☐ Intact and healthy ☐ Dry with fungus or light callus ☐ Heavy callus build up ☐ Prior ulceration or amputation ☐ Existing ulceration (± warmth and erythema) Nails ☐ Well-groomed and appropriate length ☐ Unkempt and ragged ☐ Thick, damaged, or infected		Skin Intact and healthy Dry with fungus or light callus Heavy callus build up Prior ulceration or amputation Existing ulceration (± warmth and erythema) Nails Well-groomed and appropriate length Unkempt and ragged Thick, damaged, or infected
2. Assess for Peripheral Neuropathy/ Loss of Protective Sensation (LOPS)	Recommendations and Referrals*	2. Assess for Peripheral Neuropathy/ Loss of Protective Sensation (LOPS)
Sensation – monofilament testing: ☐ No: peripheral neuropathy was not detected (sensation was present at all sites) ☐ Yes: peripheral neuropathy detected (sensation was missing at one or more sites) Sensation – ask 4 questions: • Are your feet ever numb? • Do they ever tingle? • Do they ever burn? • Do they ever feel like insects are crawling on them? ☐ No to all 4 questions ☐ Yes to any of the questions		Sensation – monofilament testing: ☐ No: peripheral neuropathy was not detected (sensation was present at all sites) ☐ Yes: peripheral neuropathy detected (sensation was missing at one or more sites) Sensation – ask 4 questions: • Are your feet ever numb? • Do they ever tingle? • Do they ever burn? • Do they ever feel like insects are crawling on them? ☐ No to all 4 questions ☐ Yes to any of the questions
3. Assess for Peripheral Arterial Disease (PAD)	Recommendations and Referrals*	3. Assess for Peripheral Arterial Disease (PAD)
Pedal Pulses: Present Absent Dependent rubor: No Yes Cool foot: No Yes		Pedal Pulses: Present Absent Dependent rubor: No Yes Cool foot: No Yes
4. Assess for Bony Deformity (and Footwear)	Recommendations and Referrals*	4. Assess for Bony Deformity (and Footwear)
Deformity: ☐ No deformity ☐ Deformity (i.e. dropped MTH or bunion, chronic Charcot changes) ☐ Amputation ☐ Acute Charcot (+ warmth and erythema) Range of Motion: ☐ Full range in hallux ☐ Limited range of motion in hallux ☐ Rigid hallux Footwear: ☐ Appropriate ☐ Inappropriate ☐ Causing trauma		Deformity: ☐ No deformity ☐ Deformity (i.e. dropped MTH or bunion, chronic Charcot changes) ☐ Amputation ☐ Acute Charcot (+ warmth and erythema) Range of Motion: ☐ Full range in hallux ☐ Limited range of motion in hallux ☐ Rigid hallux Footwear: ☐ Appropriate ☐ Inappropriate ☐ Causing trauma

^{*} Refer to Steps 2 and 3 before completing this area.

► Step 2: Determine the Risk for Ulceration and Amputation

Instructions: Review the results from Inlow's 60-second Diabetic Foot Screen to identify parameters that put the patient at risk. Align the identified parameters with the International Working Group of the Diabetic Foot (IWGDF) Risk Classification System² (plus Urgent Risk) to identify which risk category your patient falls into.

► Step 3: Create a Plan of Care with Your Patient Based on Identified Risks

Instructions: Based on the risk classification and clinical indicators develop a plan of care with your patient that best meets their needs.

Risk Classification	Clinical Indicators	Screening Frequency	Recommendations and Actions**
Low Risk (Category 0)	Presence of diabetes. No LOPS, PAD or deformity	Screen every 12 months	☐ Education on healthy foot habits and risk factors [†] ☐ Daily self-inspection of feet ☐ Appropriate foot and nail care ☐ Well-fitting shoes, exercise as able
Moderate Risk (Category 1)	LOPS	Screen every 6 months	 □ Education on LOPS[†] □ Daily self-inspection of feet □ Professional foot care, fitted shoes, custom full-contact orthotics and diabetic socks □ Referral to a rehab specialist to provide a plan for fitness (exercise prescription) based on risk factors
High Risk (Category 2)	LOPS ± PAD/deformity/ evidence of pressure/ onychomycosis	Screen every 3–6 months	 □ Education on PAD, deformity, pressure and/or onychomycosis[†] □ Daily self-inspection of feet □ Professional foot care, fitted shoes, custom full-contact orthotics and diabetic socks □ Vascular studies ± referral if appropriate □ Pain management for ischemic pain, if present □ Deformity addressed if present with orthotic shoes □ Orthopedic referral if required □ Referral to a rehab specialist to provide a plan for fitness (exercise prescription) based on risk factors
Very High Risk (Category 3)	Presence of diabetes with previous history of ulceration/amputation	Screen every 1–3 months	 □ Education on risk of recurrence[†] □ Daily self-inspection of feet □ Professional foot care, fitted shoes, custom full-contact orthotics and diabetic socks □ Referral to a rehab specialist to provide a plan for fitness (exercise prescription) based on risk factors □ Modified footwear and/or prosthesis based on level of amputation
Urgent Risk	Ulcer ± infection, active Charcot, PAD (gangrene, acute ischemia)	Urgent care required	☐ Referral to services such as a wound or limb salvage clinic

^{**} These recommendations and actions are not all-inclusive. Actions need to be customized to meet each patient's needs. Encourage patients to manage their glycemic levels, triglycerides, weight, hypertension, and lifestyle choices such as smoking. Ensure the patient knows where to access professional assistance in the event of an urgent foot complication.
